## MORE POWERFUL FINGERPRINT IDENTIFICATION FUNCTION

Semiconductor equipped with fast anti-counterfeiting identification module, 1s fast recognition, Combined with the optimization algorithm, the population can be identified from 14-55 years old to 7-70 years old. Optimize for dry, wet, incomplete fingerprint and other special cases to improve the recognition rate.

## 1S FAST IDENTIFICATION

Using the technology of automatic identification of virtual password (the valid password is 6-10 bits, and the maximum input length of the front and back virtual passwords is 24 bits). If there are strangers around, you can add interference numbers before and after the correct password, unlock the door safely, and prevent peeping and leaking the password.
